

Prompting Fundamentals

Prompt engineering is the process of designing and refining your input in a way that helps LLM give the best possible answer. It's about figuring out how to ask so you get the result you want.

Simple Steps for Writing a Good Prompt

STEP 1

Outline the Task

Be clear about what you need Chat agent to do. Outline what you want, who it's for, and why it matters.

 **Tip:** Use an action verb, like "plan" or "draft" or "research."

Example 1

Help me plan a trip itinerary for Europe in September 2026.

Example 2

Summarize last quarter's sales results and suggest marketing strategies for next quarter.

STEP 2

Give Helpful Context

Add any background or documentation that will help, including external sources like files, images, or documents.

Example 1

I'm traveling with my 2-year-old, who loves trains, and we want to use public transportation as much as possible.

Example 2

Use data from our attached Q2 sales report.

STEP 3

Describe Your Ideal Output

Tell Chat agent how you want the response. Include details like tone, format, length, audience, and any constraints so the output matches your needs.

Example 1

Create a table with activities for 7 days, ensuring time for transportation between each activity.

Example 2

Write it as a formal executive summary.

Testleaf

Try It on Your Own

	Okay	Better	Best
Prompt	Explain machine learning.	Explain how machine learning works using a simple everyday analogy.	Explain how machine learning works using a simple everyday analogy.
Requirements	–	Keep the explanation under 120 words. Avoid technical jargon. Make it understandable for someone who has never studied computer science.	Use an analogy about learning a skill (like cooking, sports, or playing music). Keep it under 100 words. Avoid technical terms. Write in 3 short paragraphs: the analogy, how the analogy maps to machine learning, and one sentence summarizing the core idea.

More Helpful Tips for Writing Prompts

Break big tasks into smaller steps

If your request has multiple parts, try splitting it up. This makes it easier for ChatGPT to give clear, focused answers.

Be specific, but keep it simple

More detail can improve the response, but focus on what matters most. Too much extra information can sometimes make the answer less helpful.

Ask for options

If you want choices, say so. Example: "Suggest two different ways to present this report."

Set priorities

Let Chat agent know what matters most to you—accuracy, creativity, speed, or something else.
