

Home Assignment 2 - Document Question Answering using n8n (Updated)

This document summarizes the completed activities for Home Assignment 2 after updating the workflow to use the Chat Trigger node.

Objective

Build a Document Question Answering workflow that reads a PDF, extracts its content, and answers user questions using an LLM.

Workflow

Chat Trigger → Read/Write Files from Disk → Extract from PDF → Basic LLM Chain → Groq Chat Model.

Activities Completed

- Replaced Manual Trigger with Chat Trigger.
- Configured Read/Write Files from Disk to load the PDF.
- Fixed n8n file access using environment variables.
- Configured Extract from PDF to extract document text.
- Connected Groq Chat Model to the Basic LLM Chain.
- Updated the prompt to use the extracted document text and the chat input.
- Validated interactive question answering from the chat window.

Test Results

1. Who is the CEO? → John Smith
2. What is the company name? → ABC Technologies
3. Questions not present in the document return an appropriate fallback response.

Challenges & Resolution

- 'Access to the file is not allowed' error resolved by configuring N8N_RESTRICT_FILE_ACCESS_TO and N8N_BLOCK_FILE_ACCESS_TO_N8N_FILES environment variables.
- Changed Extract node operation from generic text extraction to PDF extraction.

Conclusion

The workflow successfully performs document question answering using a Chat Trigger and Groq LLM. Users can ask questions interactively, and the workflow returns answers based only on the uploaded PDF.
